# (\*)Research Projects:

## Agriculture Applications Using

- Machine learning (ML) and Deep learning (DL) are the latest emerging trends in the computer field. It has been already used in different domain like healthcare, cybercrime, biochemistry, robotics, metrology, banking sector, medicine, food etc. to solve the complex problems by the researchers

## Machine Intelligence

- . Deep learning algorithms are making machine learning more powerful and accurate. By using automated machine learning (AutoML) we can cut the demand of ML experts, we can automate the ML pipeline with more accuracy

While performing agriculture tasks, the following flowchart is followed by farmers

Step 1: Selection of Crop

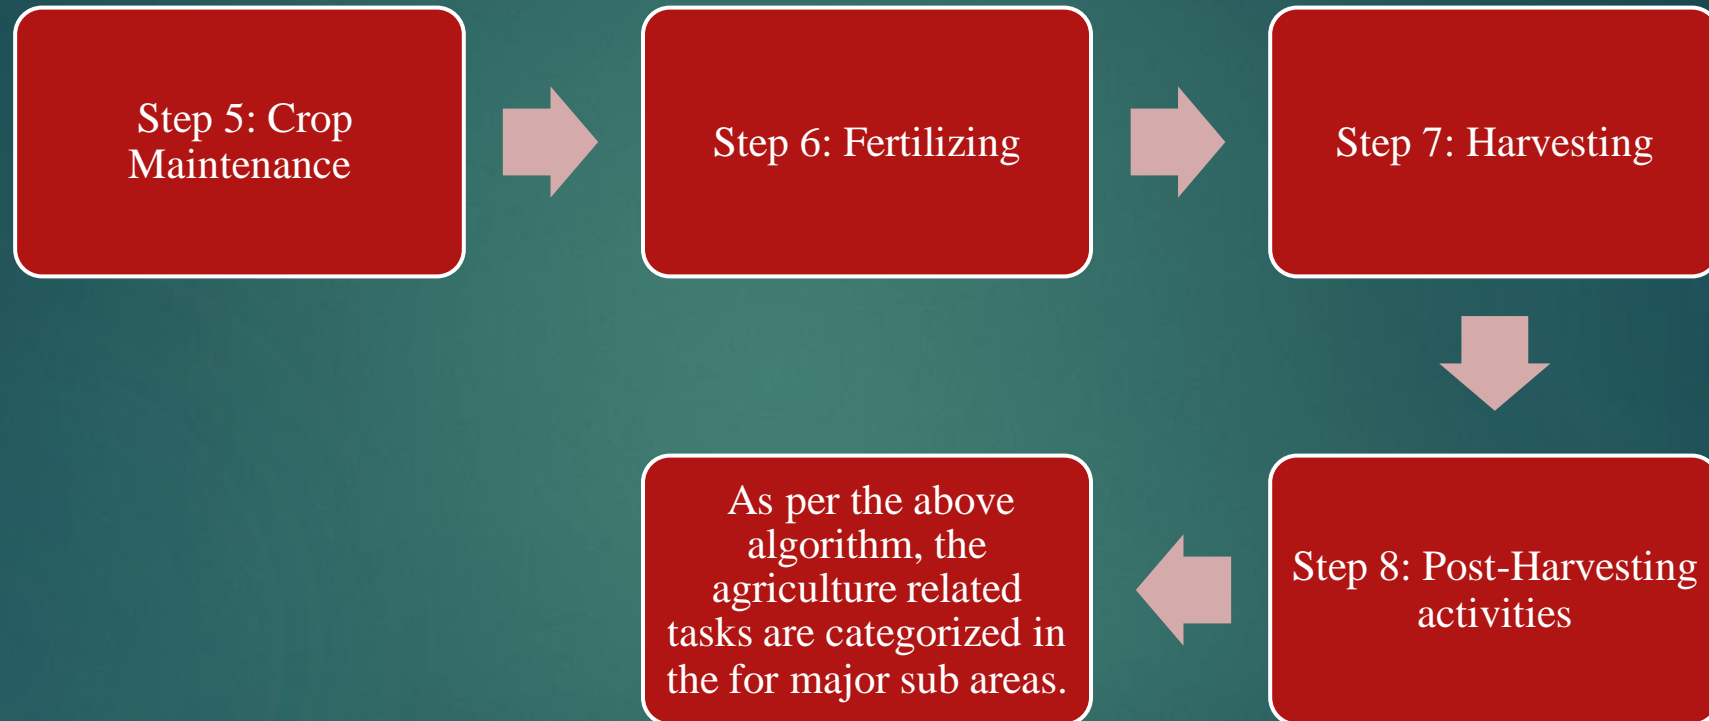

Step 2: Land Preparation

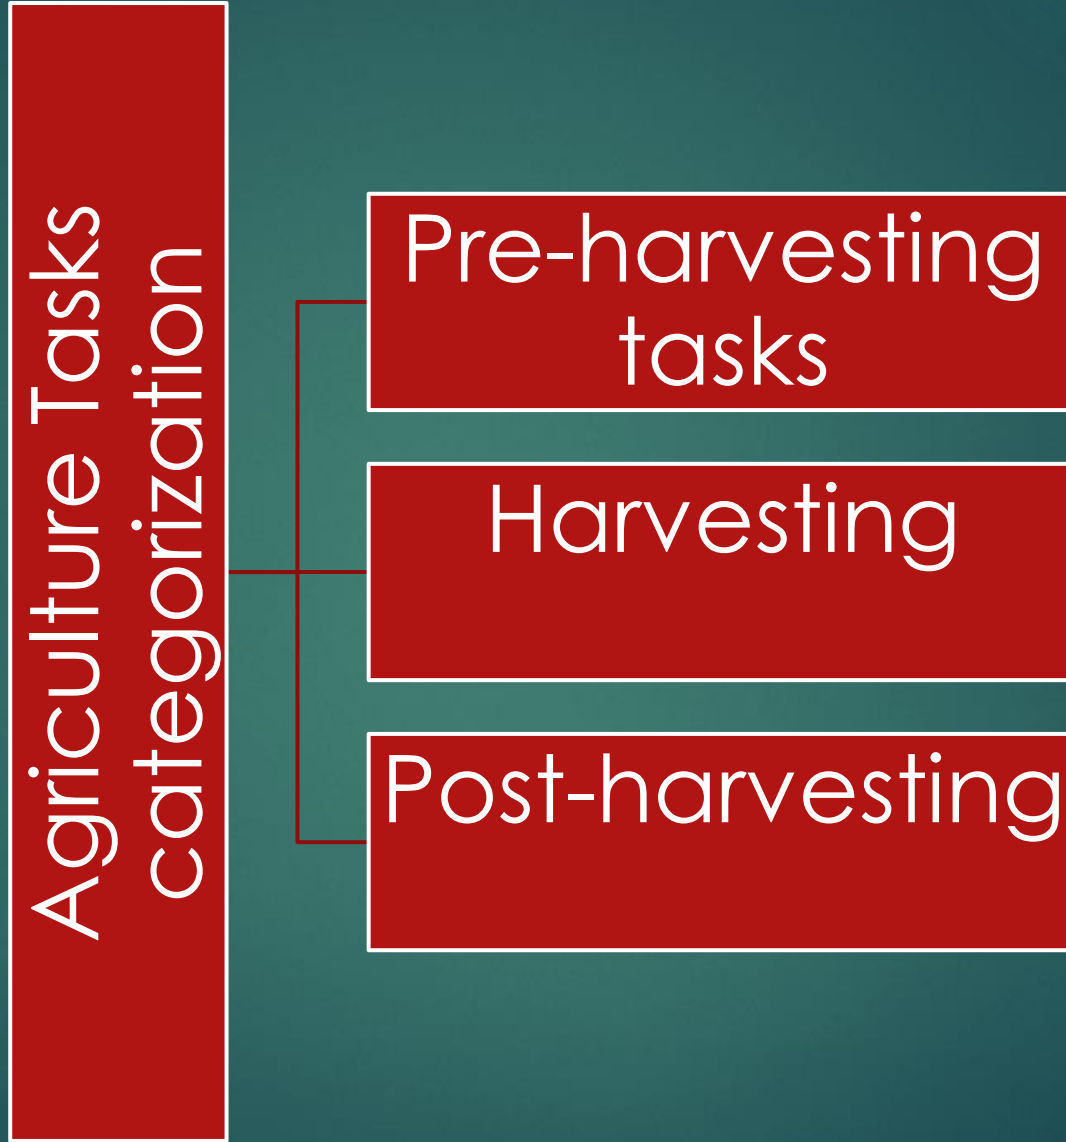

Step 3: Seed Sowing

Step 4: Irrigation

## Pre-harvesting

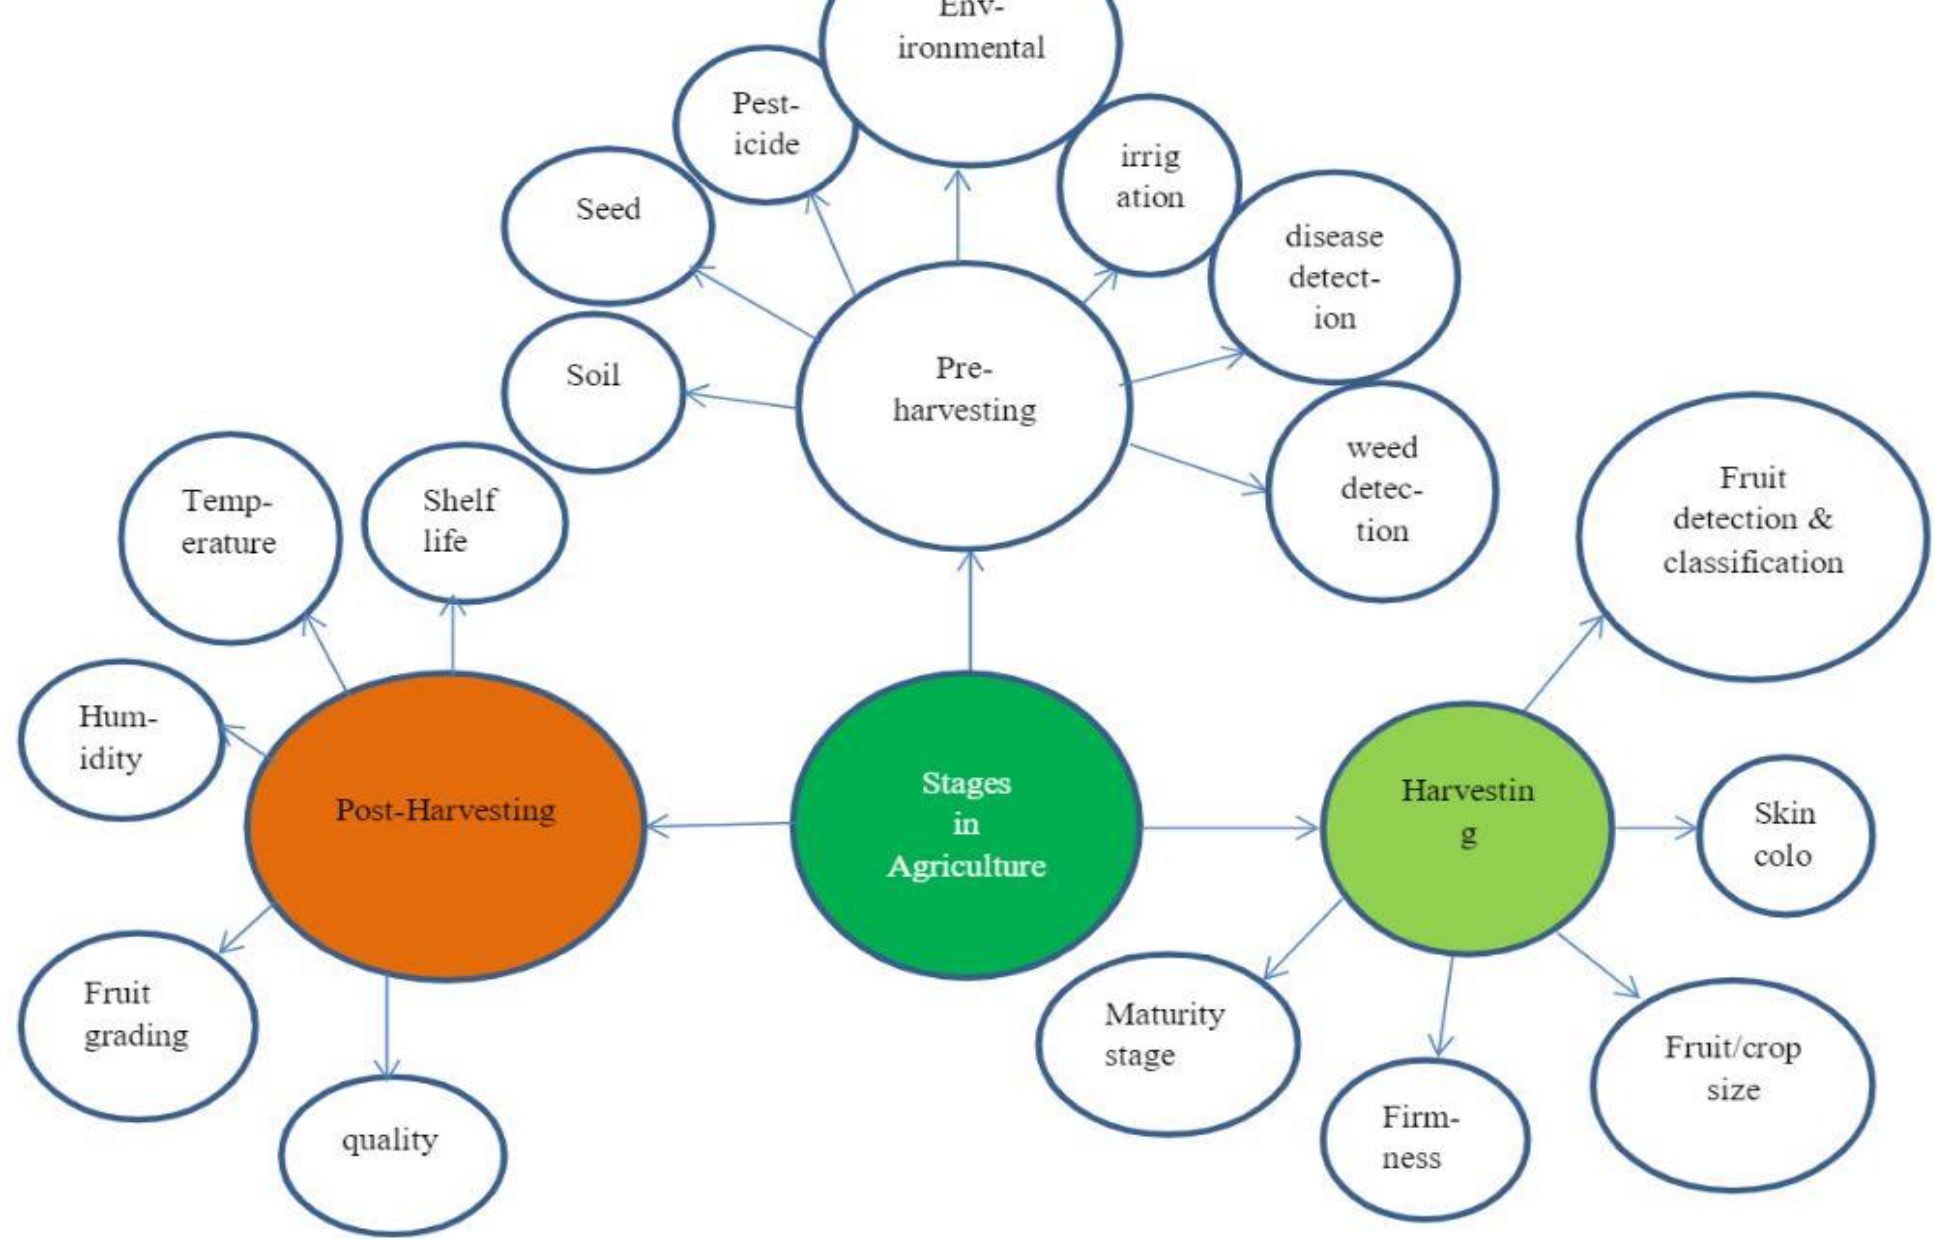

- Soil, seeds quality, fertiliser/pesticide application, pruning, cultivar selection, genetic and environmental conditions, irrigation, crop load, weed detection, disease detection.

## Harvesting

- Fruit/crop size, skin colour, firmness, taste, quality, maturity stage, market window, fruit detection and classification.

## Harvesting

- Factors affecting the fruit shelf-life such as temperature, humidity, gases used in fruit containers, usage of chemicals in postharvest and fruit handling processes to retain the quality, fruit grading as per quality.
